SUMMARY

Full-stack engineer with 2 years building production backends and web apps in Python and React. Comfortable across the stack — REST/GraphQL APIs, distributed systems, real-time data pipelines, billing systems, and LLM features — and an open-source contributor to PyPI.

SKILLS

Languages: Python, JavaScript/TypeScript, SQL **Backend:** Django, Django REST Framework, GraphQL, FastAPI/Flask, Celery **Frontend:** React (15–19), React Native (Expo), Next.js, Tailwind, Zustand, TanStack Query **Data & Infra:** Kafka, Redis, Elasticsearch, PostgreSQL, MySQL, Docker, Nginx, AWS S3 **AI:** OpenAI API, prompt engineering, AI-assisted development (Claude Code)

EXPERIENCE

Associate Software Engineer — Turbolab Technologies (ScrapeHero)

Jun 2024 – Present (Software Development Intern → Associate, Dec 2024)

- Built backend services and APIs (Django, DRF, GraphQL) across a large-scale web-scraping SaaS platform; designed data models, migrations, filters, and serializers.
 - Re-architected a real-time **credit-metering** path into an **atomic Redis Lua script**, cutting ~4 SQL queries + 6 Redis calls per request to one atomic call and removing the database from the hot path (write-back sync to Postgres).
 - Made an **event-driven data pipeline idempotent** under at-least-once delivery — eliminated duplicate events and double processing via terminal-status guards.
 - Built **Stripe billing** end-to-end: subscriptions, invoices, refunds, metered pricing, and concurrency-safe auto-recharge using a Redis lock to prevent double-charging.
 - Lead developer on an **LLM Review-Intelligence platform** — built an OpenAI analysis engine with structured-JSON output, prompt grounding, and content-hash result caching.
 - Shipped React + TypeScript frontends: dashboards, virtualized data tables, and a chatbot.
-

OPEN SOURCE

PyPI Warehouse — github.com/pypi/warehouse

The codebase powering pypi.org, the official Python Package Index — used by millions of Python developers.

- Shipped UX fixes to collaborator-role notification emails reaching maintainers across the Python ecosystem — turned plain-text project/user references into working links and added a dynamic role-FAQ link, so recipients can act on a role change without hunting for the page. ([#19430](#), [#19458](#))
 - Replaced hardcoded URLs with a reusable route helper — removed a maintenance trap and kept the change i18n-safe across all translated locales.
 - Improved WCAG accessibility by fixing HTML heading hierarchy on project pages, so screen-reader users get a correct document outline.
-

PROJECTS

KKMA Event Tracker — Cross-platform mobile app (React Native, Expo, Supabase, NativeWind): event management, member registration, admin tabs, infinite-scroll lists; EAS builds.

Job-Aggregation Pipeline — Python ETL via the Apify API; normalizes and deduplicates ~400 job listings into a ranked, filterable dataset.

Promptopia / Image Generator — Full-stack AI prompt-sharing app (Next.js, MongoDB) and a Flask text-to-image app using Hugging Face models.

EDUCATION

B.Tech in Computer Science & Engineering — Government Engineering College, Sreekrishnapuram, Palakkad · 2020 – 2024
